Welcome

Welcome to the White Rose Maths’ new, more detailed schemes of learning for 2018-19.

We have listened to all the feedback over the last 2 years and as a result of this, we have made some changes to our primary schemes. **They are bigger, bolder and more detailed than before.**

The new schemes still have the **same look and feel** as the old ones, but we have tried to provide more detailed guidance. We have worked with enthusiastic and passionate teachers from up and down the country, who are experts in their particular year group, to bring you additional guidance. **These schemes have been written for teachers, by teachers.**

*We all believe that every child can succeed in mathematics.* Thank you to everyone who has contributed to the work of White Rose Maths. It is only with your help that we can make a difference.

We hope that you find the new schemes of learning helpful. As always, get in touch if you or your school want support with any aspect of teaching maths.

If you have any feedback on any part of our work, do not hesitate to contact us. Follow us on Twitter and Facebook to keep up-to-date with all our latest announcements.

**White Rose Maths Team**

🐦 [@WhiteRoseMaths](https://twitter.com/WhiteRoseMaths)

Facebook: [White Rose Maths](https://www.facebook.com/WhiteRoseMaths)
What’s included?

Our schemes include:

- Small steps progression. These show our blocks broken down into smaller steps.
- Small steps guidance. For each small step we provide some brief guidance to help teachers understand the key discussion and teaching points. This guidance has been written for teachers, by teachers.
- A more integrated approach to fluency, reasoning and problem solving.
- Answers to all the problems in our new scheme.
- This year there will also be updated assessments.
- We are also working with Diagnostic Questions to provide questions for every single objective of the National Curriculum.
Meet the Team

The schemes have been developed by a wide group of passionate and enthusiastic classroom practitioners.

Caroline Hamilton  Beth Smith  Kelsey Brown  Julie Matthews
Faye Hirst  Emma Davison  Mary-Kate Connolly  Kate Henshall
Sam Shutkever  Rachel Otterwell  Jenny Lewis  Stephen Monaghan
Special Thanks
The White Rose Maths team would also like to say a huge thank you to the following people who came from all over the country to contribute their ideas and experience. We could not have done it without you.

**Year 2 Team**
- Chris Gordon
- Beth Prottey
- Rachel Wademan
- Emma Hawkins
- Scott Smith
- Valda Varadinek-Skelton
- Chloe Hall
- Charlotte James
- Joanne Stuart
- Michelle Cornwell

**Year 3 Team**
- Becky Stanley
- Nicola Butler
- Laura Collis
- Richard Miller
- Claire Bennett
- Chris Conway

**Year 4 Team**
- Terrie Litherland
- Susanne White
- Hannah Kirkman
- Daniel Ballard
- Isobel Gabanski
- Laura Stubbs

**Year 5 Team**
- Lynne Armstrong
- Laura Heath
- Clare Bolton
- Helen Eddie
- Chris Dunn
- Rebecca Gascoigne

**Year 6 Team**
- Lindsay Coates
- Kayleigh Parkes
- Shahir Khan
- Sarah Howlett
How to use the small steps

We were regularly asked how it is possible to spend so long on particular blocks of content and National Curriculum objectives.

We know that breaking the curriculum down into small manageable steps should help children understand concepts better. Too often, we have noticed that teachers will try and cover too many concepts at once and this can lead to cognitive overload. In our opinion, it is better to follow a small steps approach.

As a result, for each block of content we have provided a “Small Step” breakdown. We recommend that the steps are taught separately and would encourage teachers to spend more time on particular steps if they feel it is necessary. Flexibility has been built into the scheme to allow this to happen.

Teaching notes

Alongside the small steps breakdown, we have provided teachers with some brief notes and guidance to help enhance their teaching of the topic. The “Mathematical Talk” section provides questions to encourage mathematical thinking and reasoning, to dig deeper into concepts.

We have also continued to provide guidance on what varied fluency, reasoning and problem solving should look like.
Assessments

Alongside these overviews, our aim is to provide an assessment for each term’s plan. Each assessment will be made up of two parts:

**Part 1:** Fluency based arithmetic practice

**Part 2:** Reasoning and problem solving based questions

Teachers can use these assessments to determine gaps in children’s knowledge and use them to plan support and intervention strategies.

The assessments have been designed with new KS1 and KS2 SATs in mind.

For each assessment we provide a summary spreadsheet so that schools can analyse their own data. We hope to develop a system to allow schools to make comparisons against other schools. Keep a look out for information next year.
Teaching for Mastery

These overviews are designed to support a mastery approach to teaching and learning and have been designed to support the aims and objectives of the new National Curriculum.

The overviews:

- have number at their heart. A large proportion of time is spent reinforcing number to build competency
- ensure teachers stay in the required key stage and support the ideal of depth before breadth.
- ensure students have the opportunity to stay together as they work through the schemes as a whole group
- provide plenty of opportunities to build reasoning and problem solving elements into the curriculum.

For more guidance on teaching for mastery, visit the NCETM website:

https://www.ncetm.org.uk/resources/47230

Concrete - Pictorial - Abstract

We believe that all children, when introduced to a new concept, should have the opportunity to build competency by taking this approach.

Concrete – children should have the opportunity to use concrete objects and manipulatives to help them understand what they are doing.

Pictorial – alongside this children should use pictorial representations. These representations can then be used to help reason and solve problems.

Abstract – both concrete and pictorial representations should support children’s understanding of abstract methods.

Need some CPD to develop this approach? Visit www.whiterosemaths.com for find a course right for you.
Training

White Rose Maths offer a plethora of training courses to help you embed teaching for mastery at your school.

Our popular JIGSAW package consists of five key elements:

- CPA
- Bar Modelling
- Mathematical Talk & Questioning
- Planning for Depth
- Reasoning & Problem Solving

For more information and to book visit our website [www.whiterosemaths.com](http://www.whiterosemaths.com) or email us directly at support@whiterosemaths.com
Additional Materials

In addition to our schemes and assessments we have a range of other materials that you may find useful.

**KS1 and KS2 Problem Solving Questions**

For the last three years, we have provided a range of KS1 and KS2 problem solving questions in the run up to SATs. There are over 200 questions on a variety of different topics and year groups.

**End of Block Assessments**

New for 2018 we are providing short end of block assessments for each year group. The assessments help identify any gaps in learning earlier and check that children have grasped concepts at an appropriate level of depth.
FAQs

If we spend so much time on number work, how can we cover the rest of the curriculum?
Children who have an excellent grasp of number make better mathematicians. Spending longer on mastering key topics will build a child's confidence and help secure understanding. This should mean that less time will need to be spent on other topics.
In addition, schools that have been using these schemes already have used other subjects and topic time to teach and consolidate other areas of the mathematics curriculum.

Should I teach one small step per lesson?
Each small step should be seen as a separate concept that needs teaching. You may find that you need to spend more time on particular concepts. Flexibility has been built into the curriculum model to allow this to happen. This may involve spending more than one lesson on a small step, depending on your class’ understanding.

How do I use the fluency, reasoning and problem solving questions?
The questions are designed to be used by the teacher to help them understand the key teaching points that need to be covered. They should be used as inspiration and ideas to help teachers plan carefully structured lessons.

How do I reinforce what children already know if I don’t teach a concept again?
The scheme has been designed to give sufficient time for teachers to explore concepts in depth, however we also interleave prior content in new concepts. E.g. when children look at measurement we recommend that there are lots of questions that practice the four operations and fractions. This helps children make links between topics and understand them more deeply. We also recommend that schools look to reinforce number fluency through mental and oral starters or in additional maths time during the day.
Meet the Characters

Children love to learn with characters and our team within the scheme will be sure to get them talking and reasoning about mathematical concepts and ideas. Who’s your favourite?

Overview

Small Steps

- Count objects to 100 and read and write numbers in numerals and words
- Represent numbers to 100
- Tens and ones with a part-whole model
- Tens and ones using addition
- Use a place value chart
- Compare objects
- Compare numbers
- Order objects and numbers
- Count in 2s, 5s and 10s
- Count in 3s

NC Objectives

- Read and write numbers to at least 100 in numerals and in words.
- Recognise the place value of each digit in a two digit number (tens, ones).
- Identify, represent and estimate numbers using different representations including the number line.
- Compare and order numbers from 0 up to 100; use <, > and = signs.
- Use place value and number facts to solve problems.
- Count in steps of 2, 3 and 5 from 0, and in tens from any number, forwards and backwards.
Count Objects to 100

Notes and Guidance

To build on skills learned in Year 1, children need to be able to count objects to 100 in both numerals and words.

Problems should be presented in a variety of ways e.g. numerals, words and images. Variation should challenge children by providing them with missing numbers which are non-consecutive.

Varied Fluency

Count and write the number of cars in the car park.

<p>| | | | | |</p>

</tbody>
</table>

There are ____ cars in the car park.

What numbers are represented below?
Write your answer in numerals and words.

![Number Representation](image8)

Match the numerals to the words.

17 48 38 70

Thirty-eight  Seventy  Forty-eight  Seventeen

Mathematical Talk

How can you count the cars? Do you have a strategy? What is one more/one less?

Which is the largest number? Which number is tricky to write in words?

Which numbers sound similar? How are 17 and 70 different? Can you show me?
Count Objects to 100

Reasoning and Problem Solving

Jack says he has 61 Is he correct?

Jack is incorrect. He has 16 not 61

Explain your reasoning.

Here are two sets of objects.

Which are easier to count? Explain your answer.

The strawberries are easier to count because they are set out on ten frames.

Each jar contains 10 cookies.

How many cookies are there altogether?

Write your answer in numerals and words.

What strategy did you use?

Did your partner use a different method?

What is the best strategy to use?

There are 48 (forty-eight) cookies altogether.

Children may count in 10s and 1s or know that there are 4 tens which are equal to 40 and then count on 8 more.
Represent Numbers

Notes and Guidance

Children need to be able to represent numbers to 100 using a range of concrete materials.

Children should also be able to state how a number is made up. For example, they can express 42 as 4 tens and 2 ones or as 42 ones.

Mathematical Talk

How have the beads been grouped? How does this help you count?

Which part of the resource represents tens/ones?

Which resource do you prefer to use for larger numbers? Which is quickest? Which would take a long time?

Varied Fluency

Here is part of a bead string.

Complete the sentences.
There are _____tens and _____ones.
The number is _____.
Represent 45 on a bead string and complete the same sentence stems.

Match the number to the correct representation.

Represent 67 in three different ways.
Represent Numbers

Reasoning and Problem Solving

Where would 36 go on each of the number lines?

0 100
0 40
30 40

How many two digit numbers can you make using the digit cards?

70, 20, 72, 27

What is the largest number?
Prove it by using concrete resources.

The largest number is 72

What is the smallest number?
Prove it by using concrete resources.

The smallest number is 20

Why can't the 0 be used as a tens number?

Because it would make a 1 digit number.

One of these images does not show 23
Can you explain the mistake?

A

B

C does not show 23, it shows 32
They have reversed the tens and ones.

C

D
Tens and Ones (1)

Notes and Guidance

Children partition numbers and should have an understanding of what each digit represents.

It is important that children can partition numbers in a variety of ways, not just as tens and ones. For example, 58 is made up of 5 tens and 8 ones or 4 tens and 18 ones, or 20 tens and 38 ones, etc.

Mathematical Talk

Which part do we know? How can we use the whole and part to work out the missing part?

Can you use concrete resources/draw something to help you partition?

How can you rearrange the counters to help you count the lemon and strawberry cupcakes?

Varied Fluency

Complete the part-whole models.

The ten frames represent lemon and strawberry cupcakes. Draw a part-whole model to show how many cupcakes there are altogether.
Complete each part-whole model in a different way.

6 tens and 4 ones

Complete the extended part-whole model.

76

30 10

40 36

14 24 64

50 64
Tens and Ones (2)

Notes and Guidance

Children continue to use a part-whole model to explore how tens and ones can be partitioned and recombined to make a total.

This small step will focus on using the addition symbol to express numbers to 100. For example, 73 can be written as $70 + 3 = 73$.

Mathematical Talk

What clues are there in the calculations? Can we look at the tens number or the ones number to help us?

What number completes the part-whole model?

What is the same and different about the calculations?

What are the key bits of information? Can you draw a diagram to help you?

Varied Fluency

Match the number sentence to the correct number.

- $20 + 19$
- $10 + 4$
- $40 + 0$
- $80 + 1$

40 14 81 39

Complete the part-whole model and write four number sentences to match.

- $28 = 20 + 8$
- $28 = 25 + 3$
- $28 = 20 + 8$
- $28 = 20 + 8$

Hattie has 20 sweets and Noah has 15 sweets. Represent the total number of sweets:

- With concrete resources.
- In a part-whole model.
- As a number sentence.
Tens and Ones (2)

Reasoning and Problem Solving

Teddy thinks that,

40 + 2 = 402

Joel has combined the numbers to make 402.

Explain the mistake he has made.

Can you show the correct answer using concrete resources?

Fill in the missing numbers.

1 ten + 3 ones = 13

2 tens + ___ ones = 23

3 tens + 3 ones = ____

___ tens + 3 ones = 43

What would the next number in the pattern be?

1 ten + 3 ones = 13

2 tens + 3 ones = 23

3 tens + 3 ones = 33

4 tens + 3 ones = 43

5 tens + 3 ones = 53
Place Value Charts

Notes and Guidance

Children should formally present their work in the correct place value columns to aid understanding of place value.

It is important for children to use concrete, pictorial and abstract representations in their place value chart.

Mathematical Talk

How many tens are there?

How many ones are there?

What is different about using Base 10 to using place value counters?

Can you write any other number sentences about the place value chart?

Varied Fluency

What number is represented in the place value chart?

<table>
<thead>
<tr>
<th>Tens</th>
<th>Ones</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Complete the place value chart using Base 10 and place value counters to represent the number 56

<table>
<thead>
<tr>
<th>Tens</th>
<th>Ones</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Tens</th>
<th>Ones</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>6</td>
</tr>
</tbody>
</table>

What number is represented in the place value chart?

<table>
<thead>
<tr>
<th>Tens</th>
<th>Ones</th>
</tr>
</thead>
<tbody>
<tr>
<td>9</td>
<td>1</td>
</tr>
</tbody>
</table>

Write two different number sentences for this number.

____ + ____ = ____
Place Value Charts

Reasoning and Problem Solving

How many two digit numbers can you make that have the same number of tens and ones?

11, 22, 33, 44, 55, 66, 77, 88, 99

Show each one on a place value chart.

<table>
<thead>
<tr>
<th>Tens</th>
<th>Ones</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Do both place value charts show the same value?

Yes, they both have the same value of 41

40 + 1 = 41
30 + 11 = 41

Same: Both A and B show 41

Different: There are a different number of tens and ones in each place value chart.

What is the same?
What is different?

26
Compare Objects

Notes and Guidance

Comparing objects is introduced once children have a secure understanding of numbers in a place value chart.

Children are expected to compare a variety of objects using the vocabulary ‘more than’, ‘less than’ and ‘equal to’ and the symbols <, >, =.

Mathematical Talk

How can you arrange the objects to make them easy to compare?

Do groups of ten help you count? Why?

Do groups of ten help you compare? Why?

Varied Fluency

A packet of sweets contain 10 sweets.

Who has the most sweets?

Use cubes to show that:
• Eleven is less than fifteen
• 19 is greater than 9
• 2 tens is equal to 20

Use <, > or = to complete.
Compare Objects

Reasoning and Problem Solving

Rosie and Amir are comparing numbers they have made.

Rosie's number: 
Amir's number: 

Rosie is incorrect because Amir has 4 tens which makes 40 and Rosie has 3 tens and 6 ones which makes 36, therefore Amir has more.

My number is greater because I have more objects.

Is Rosie correct?

Explain your answer.

Add more Base 10 to make the number shapes and the Base 10 equal.

= 

How much did you add in total to make them equal?

What is the smallest amount you could add if the symbol changed to <?

Children should add 3 tens and 4 ones to make 54 on both sides.

If the symbol changed to < the smallest amount they could add is 3 tens and 5 ones.
Compare Numbers

Notes and Guidance

Children compare numbers using the language greater than, less than, more than, fewer, most, least and equal to.

They are able to use the symbols <, > and = to write number sentences.

Children should have access to concrete resources to help them justify their answers.

Mathematical Talk

Can you prove your answers using concrete resources?

Can you prove your answers by drawing a diagram?

Is there more than one answer?

Do you need to work the number sentences out to decide which is greater?

Varied Fluency

Complete the statements using more than, less than or equal to.

42 is _______________ 46
81 is _______________ 60 + 4

30 + 8 is ____________ thirty-eight

Complete the number sentences.

4 tens and 9 ones > ______________
____________________ < 70 + 5
____________________ = eight tens

Put <, > or = in each circle to make the statements correct.

28 30
90 70 + 28
30 + 23 40 + 13
20 + 14 24
## Compare Numbers

### Reasoning and Problem Solving

| How many different numbers can go in the box? | 14, 15, 16, 17, 18, 19 |
| 13 < [ ] < 20 |

### True or False?

One ten and twelve ones is bigger than 2 tens.

True

One ten and twelve ones = 22

Two tens = 20

Do you agree? Give some examples to support your answer.

Eva says,

When comparing numbers, the number with the highest number of ones is always the bigger number.

Disagree, for example 19 is smaller than 21

### White Rose Maths

Year 2 | Autumn Term | Week 1 to 3 – Number: Place Value
Order Objects and Numbers

Notes and Guidance
Children order numbers and objects from smallest to greatest or greatest to smallest. They should be encouraged to use concrete or pictorial representations to prove or check their answers. Children use the vocabulary ‘smallest’ and ‘greatest’ and may also use the < or > symbols to show the order of their numbers.

Mathematical Talk
How does the number line help you order the numbers?
How does Base 10 prove that your order is correct?

Varied Fluency

Circle the numbers 48, 43 and 50 on the number line.

Put the numbers 48, 43 and 50 in order starting with the smallest.

Use Base 10 to make the numbers sixty, sixteen and twenty-six. Write the numbers in order starting with the greatest number.

The diagrams represent different numbers.

Circle the greatest number.
Circle the smallest number.
Complete the number sentence _____ > _____.

Complete the number sentence ______ > ______.
Order Objects and Numbers

Reasoning and Problem Solving

Order the numbers below. Which would be the fourth number?

33  53  37
29  34  43

Explain how you ordered them.

If I ordered them from smallest to largest:
29, 33, 34, 37, 43, 53
37 would be the fourth number. Alternatively, if I order the numbers from largest to smallest:
53, 43, 37, 34, 33, 29
34 would be the fourth number.

Mo has written a list of 2-digit numbers.

14, 23, 32, 41

The digits of each number add up to five. None of the digits are zero.

Can you find all the numbers Mo could have written?

Write the numbers in order from smallest to largest.

What strategy did you use?
Count in 2s, 5s and 10s

**Notes and Guidance**

Children count forwards and backwards in 2s, 5s and 10s. It is important that children do not always start from zero, however they should start on a multiple of 2 or 5 when counting in 2s and 5s but can start from any number when counting in 10s. For example when counting in 2s they should not start at 3. Encourage children to look for patterns as they count.

**Mathematical Talk**

What do you notice? Are the numbers getting larger or smaller?

Are the numbers getting bigger or smaller each time? By how many?

Can you spot a pattern?

Why is it the odd one out? Can you correct the mistake?

**Varied Fluency**

- Continue each number sequence.

- Circle the odd one out in each number sequence.
  - 2, 4, 6, 8, 9, 10, 12........
  - 0, 5, 10, 20, 30, 40........
  - 35, 30, 25, 20, 12, 10......

- Count forwards and backwards in jumps of 10 from fifty-seven.
### Count in 2s, 5s and 10s

#### Reasoning and Problem Solving

<table>
<thead>
<tr>
<th>Eva says,</th>
<th>Agree. Each number in the 5 times table does end in a 5 or 0 5, 10, 15, 20, 25, 30, 35, 40, 45, 50. If you count in 5s from any number in the five times table, your numbers will end in 5 or 0.</th>
<th>Always, sometimes, never?</th>
</tr>
</thead>
</table>
| Do you agree with Eva? | Prove it. | **Always**  
- When counting in 2s from zero the numbers are even.  
- When counting in 5s from zero the numbers are even.  
- When counting in 10s from zero the numbers are even.  

Teddy and Whitney are both counting from zero to twenty.  
- Teddy is counting in 2s.  
- Whitney is counting in 5s.  

Will they say any of the same numbers? What do you notice about your answer? | **Sometimes**  
| **Always** |
| Yes they will both say 10 and 20 | The numbers that are the same are the tens. |
Count in 3s

Notes and Guidance

Children count forwards and backwards in 3s from any multiple of 3.

Encourage children to look for patterns as they count and use resources such as a number track, a counting stick and concrete representations.

Mathematical Talk

What do you notice?

Are the numbers getting larger or smaller?

Can you spot a pattern?

Varied Fluency

What do you notice about the numbers that are circled? Continue the pattern.

0 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18

Complete the number sequences.

Sid has 15 stickers. He collects 3 more each day. Complete the number track to show how many he will have in six days.

15
Count in 3s

Reasoning and Problem Solving

True or False?

I start at 0 and count in 3s I say the number 14

False. If I count in 3s I say 3, 6, 9, 12, 15....

Teddy is counting in 2s and Jack is counting in 3s.

<table>
<thead>
<tr>
<th>Teddy</th>
<th>2</th>
<th>4</th>
<th>6</th>
<th>8</th>
</tr>
</thead>
<tbody>
<tr>
<td>Jack</td>
<td>3</td>
<td>6</td>
<td>9</td>
<td>12</td>
</tr>
<tr>
<td>+</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

If Teddy and Jack add their numbers together they will be counting in 5s.

If Teddy and Jack both count in 5s their new pattern would be counting in 10s.

Teddy says, If we add our numbers together as we count we can make a new number pattern.

What pattern do they make? What happens if both Teddy and Jack count in 5s and they add them together to make a new pattern?
## Overview

### Small Steps

- Fact families – addition and subtraction bonds to 20
- Check calculations
- Compare number sentences
- Related facts
- Bonds to 100 (tens)
- Add and subtract 1s
- 10 more and 10 less
- Add and subtract 10s
- Add a 2-digit and 1-digit number – crossing ten
- Subtract a 1-digit number from a 2-digit number – crossing ten
- Add two 2-digit numbers – not crossing ten – add ones and add tens
- Add two 2-digit numbers – crossing ten – add ones and add tens
- Subtract a 2-digit number from a 2-digit number – not crossing ten
- Subtract a 2-digit number from a 2-digit number – crossing ten – subtract ones and tens
- Bonds to 100 (tens and ones)
- Add three 1-digit numbers

### NC Objectives

Recall and use addition and subtraction facts to 20 fluently, and derive and use related facts up to 100.

Add and subtract numbers using concrete objects, pictorial representations, and mentally, including: a two-digit number and ones; a two-digit number and tens; two two-digit numbers; adding three one-digit numbers.

Show that the addition of two numbers can be done in any order (commutative) and subtraction of one number from another cannot.

Solve problems with addition and subtraction: using concrete objects and pictorial representations, including those involving numbers, quantities and measures; applying their increasing knowledge of mental and written methods.

Recognise and use the inverse relationship between addition and subtraction and use this to check calculations and solve missing number problems.
Fact Families

Notes and Guidance

Children apply their understanding of known addition and subtraction facts within 20 to identify all related facts. This will include an understanding of the relationship between addition and subtraction, and knowing the purpose of the equals sign, as well as the addition and subtraction signs. This will be supported with showing the link between representations, such as part-whole models and bar models.

Mathematical Talk

What if we took away the red flowers? What are the parts? What is the whole?

Does it change the answer if we add the blue and red flowers in a different order?

What does each circle represent on the part-whole model?

Varied Fluency

Using concrete apparatus, can you talk about the relationships between the different flowers?

One relationship shown by this part-whole model is $15 + 5 = 20$
Can you write all associated number sentences in the fact family?

Look at the bar model below.
Can you write all of the number sentences in the fact family?
### Fact Families

#### Reasoning and Problem Solving

Here is an incomplete bar model. The total is greater than 10 but less than 20.

What could the numbers be? How many different combinations can you find?

<table>
<thead>
<tr>
<th>8 - 5 = 3</th>
<th>8 - 3 = 5</th>
<th>8 = 5 - 3</th>
<th>3 = 8 - 5</th>
</tr>
</thead>
</table>

Laura says, “I think that all of these facts are correct because the numbers are related.”
Sam disagrees. Who is correct? Can you prove it?

| 7 and 11 | 8 and 12 | 9 and 13 | 10 and 14 | 11 and 15 | 12 and 16 | 13 and 17 | 14 and 18 | 15 and 19 |

Which of the representations are equivalent to the bar model?

- The number line, the part-whole model and $12 = 9 + 3$

12 = 9 + 3

There are 9 cars in a car park, 3 cars leave.

9 - 3 = 12

9 - 3

Sam is correct because 8 does not equal 5 - 3.
Check Calculations

Notes and Guidance

It is essential that children have the opportunity to discuss and share strategies for checking addition and subtraction calculations. Checking calculations is not restricted to using the inverse. Teachers should discuss using concrete resources, number lines and estimating as part of a wide range of checking strategies.

Mathematical Talk

What resources could you use to check your calculation?

Can you check it in more than one way?

Why do we need to check our calculation?

Varied Fluency

Use concrete objects to check and prove whether the calculations are correct.

\[ 12 - 4 = 8 \]
\[ 7 + 8 = 15 \]

Can you use inverse operations to check \( 5 + 12 = 17 \)?

17

12

5

How many possible inverse calculations are there?

Erin writes this calculation: \( 18 - 5 = 13 \)  
Which of the following could she use to check her work?

\[ 13 + 5 \]
\[ 13 - 5 \]
\[ 18 - 13 \]
\[ 5 + 13 \]
Eva did the following calculation:

\[12 - 8 = 4\]

She checked it by using the inverse.

She did \(12 + 8 = 20\) and said that her first calculation was wrong.

What advice would you give her?

It should have been \(8 + 4 = 12\) or \(4 + 8 = 12\)

Teddy is checking Dora’s work but doesn’t do an inverse calculation.

These calculations can’t be right.

\[24 + 6 = 84\]
\[25 - 23 = 12\]
\[18 - 3 = 21\]

How might he know?

What errors have been made in each calculation?

All of the calculations involve errors:

6 has been added to the tens instead of the ones.

25 and 23 are very close in value and therefore can’t result in such a large difference.

18 and 3 have been added instead of subtracted.
Compare Number Sentences

Notes and Guidance

Children should be encouraged to examine number sentences to find missing values using structure rather than calculation. Children use numbers within 20 to explore mathematical relationships within the context of familiar numbers. Children should compare similar calculations using greater than, less than and equal to symbols.

Mathematical Talk

What other numbers make the same total?
Do we need to calculate to find the answer?
Do you notice a pattern? What would come next?

Varied Fluency

How can we use the following representation to prove that $5 + 3 = 4 + 4$?

Fill in the circles with either $<$, $>$ or $=$

- $6 + 4 \quad \bigcirc \quad 6 + 5$
- $6 + 4 \quad \bigcirc \quad 3 + 6$
- $11 - 4 \quad \bigcirc \quad 12 - 5$
- $11 - 4 \quad \bigcirc \quad 12 - 4$

Complete the missing numbers.

- $5 + 3 = 6 + \bigcirc$
- $5 + 3 = \bigcirc + 6 = 7 + \bigcirc$
- $\bigcirc + 3 = \bigcirc + 4 = 5 + 5$
## Compare Number Sentences

### Reasoning and Problem Solving

<table>
<thead>
<tr>
<th>Eva thinks she knows the missing number without calculating the answer.</th>
<th>17 is two more than 15, so the missing number must be two more than 7.</th>
<th>Both missing numbers are less than 10</th>
</tr>
</thead>
<tbody>
<tr>
<td>[ \begin{array}{c} 15 \ 8 \quad 7 \end{array} ]</td>
<td>[ 7 + \square &lt; 7 + \square ]</td>
<td>Lots of different combinations, the left number has to be smaller than the right.</td>
</tr>
<tr>
<td>Can you explain how this could be possible?</td>
<td>The missing number must be 9</td>
<td>Possible answers: 1 and 2, 1 and 3, 1 and 4, 1 and 5, 1 and 6, 1 and 7, 1 and 8, 1 and 9, Etc.</td>
</tr>
</tbody>
</table>
Related Facts

Notes and Guidance

Children should have an understanding of calculations with similar digits. For example, \(2 + 5 = 7\), so \(20 + 50 = 70\).

This involves both addition and subtraction. It is important to highlight the correct vocabulary and help children to notice what is the same and what is different between numbers and calculations. ‘Tens’ and ‘ones’ should be used to aid understanding.

Mathematical Talk

What is the same?

What is different?

Varied Fluency

- I have 3 blue pens and 4 black pens. Together I have 7 pens. Tom has 30 blue pens and 40 black pens. How many does he have in total?

Use concrete apparatus to show your thinking.

- Complete the part-whole models below:

```
  10
 /  \
/    /
100 40
```

- Find the missing numbers in the related facts.

\[5 + 4 = 9\quad 8 = 3 + 5\quad 4 = 10 - 6\]

\[50 + 40 = ____\quad 80 = 30 + ____\quad 40 = ____ - 60\]
Related Facts

Reasoning and Problem Solving

Continue the pattern.

\[
\begin{align*}
90 &= 100 - 10 \\
80 &= 100 - 20 \\
70 &= 100 - 30 \\
9 &= 10 - 1 \\
8 &= 10 - 2 \\
7 &= 10 - 3
\end{align*}
\]

What are the similarities and difference between this pattern and the following one?

The digits are the same but the place value changes.

Scott goes to the fruit shop.

One apple costs 6p.
A bag of 10 apples costs 50p.

If he needs 20 apples, what's the cheapest way to buy them?

What would the difference be between buying 20 single apples and 2 bags of 10 apples?

How much does each apple cost if he buys a bag of 10? Explain your answer.

Two bags of 10 costing £1 is cheaper.

The difference between buying 20 single apples and 2 bags of 10 is 20p.

In a bag, each apple costs 5p because

\[50p \div 10 = 5p\]
Bonds to 100 (Tens)

Notes and Guidance
Teachers should focus at this stage on multiples of 10 up to and within 100.
Links should be made again between single digit bonds and tens bonds.
Using a 10 frame to represent 100 would be a useful resource to make this link.

Mathematical Talk
What does this represent?
Why is it different to a normal 10 frame?

Varied Fluency

- Match the 10 frames to the sentences below:
  - One hundred equals eighty plus twenty
  - $100 = 100 + 0$
  - $40 + 60 = 100$

- Fill in the missing numbers
  - $2 + 6 = 8$
  - $20 + 60 = ____$
  - $2__ + __0 = 80$
  - $80 = __0 + 6__$

- Continue the pattern
  - $90 = 100 - 10$
  - $80 = 100 - 20$

Can you make up a similar pattern starting with the numbers 60, 30 and 90?
### Bonds to 100 (Tens)

#### Reasoning and Problem Solving

<table>
<thead>
<tr>
<th>Sara thinks there are 10 different number bonds to 90 using multiples of 10</th>
<th>Beth because 0 + 90 is the same as 90 + 0 Sara has repeated her answers the other way round.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Beth thinks there are only 5</td>
<td>Squares are worth 10 Triangles are worth 20 Circles are worth 30</td>
</tr>
<tr>
<td>Who is correct?</td>
<td>Can you complete the grid above so that all horizontal and vertical lines equal 60?</td>
</tr>
<tr>
<td>Can you help the person who is wrong to understand their mistake?</td>
<td>Can children create another pattern on an empty grid where each line equals 60? How many possible ways are there to solve this?</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Using multiples of 10, how many number bonds are there for the following numbers?</th>
<th>20 and 30 both have 2. 40 and 50 both have 3. When the tens digit is odd it has the same number of bonds as the previous tens number. 90 would also have 5.</th>
</tr>
</thead>
<tbody>
<tr>
<td>20 30 40 50</td>
<td></td>
</tr>
<tr>
<td>What do you notice about the amount of bonds for each number?</td>
<td></td>
</tr>
<tr>
<td>If 80 has 5 bonds, predict how many 90 would have.</td>
<td></td>
</tr>
</tbody>
</table>

### Solution

![Solution Diagram]
Add and Subtract 1s

Notes and Guidance

Children should start seeing the pattern with what happens when we add and subtract 1.
This is the step before finding ten more than or ten less than, as bridging beyond a 10 should not be attempted yet.
The pattern should be highlighted also by adding 2 (by adding another one) and then adding 3.

Mathematical Talk

What happens when we add 2?
What is the link between adding 1 and adding 2?
What about if we want to add 3?

Varied Fluency

Create sentences based on the picture.

Example
There are 4 children playing in a park. One more child joins them so there will be 5 children playing together.

Continue the pattern

22 = 29 − 7
22 = 28 − 6

Can you create an addition pattern by adding in ones and starting at the number 13?

Continue the number tracks below.

31 34 37 40 43 46 49
Bonds to 100 (Tens)

Reasoning and Problem Solving

**True or False?**

These four calculations have the same answer.

1 + 4 + 2  
2 + 4 + 1

These four calculations have the same answer.

7 – 3 – 2  
3 – 2 – 7

True, because they all equal 7 and addition is commutative.

False, because subtraction isn’t commutative.

Sam lives 5km from school. Laura lives 4km from school in the same direction.

What is the distance between Sam and Laura’s houses?

After travelling to and from school, Sam thinks that he will walk 1km more than Laura. Is he correct? Explain your answer.

What will be the difference in distance walked after 2 school days?

1km

No, he will walk 2km further. 1km on the way to school and 1km on the way home.

4km
10 More and 10 Less

Notes and Guidance
Teaching needs to focus on the importance of the tens digit.
Using a 100 square, explore with the children what happens to the numbers in the columns.
Draw attention to the idea that the tens digit changes while the ones digit remains the same.
Children will need to see how the number changes with concrete materials before moving onto more abstract ideas.

Mathematical Talk
What’s the same?
What’s different?

Varied Fluency

- Continue the number tracks below.

<table>
<thead>
<tr>
<th>10</th>
<th>20</th>
<th>30</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>35</td>
<td>45</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- Using a 100 square, circle the number that is 10 more than 27. Circle the number that is 10 less than 27. Repeat in different colours for different numbers.
What do you notice?

- Using concrete materials, complete the missing boxes.

<table>
<thead>
<tr>
<th>10 less</th>
<th>Number</th>
<th>10 more</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>2</td>

</tr>
<tr>
<td>68p</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The cost of each piece of fruit is reduced by 10p.

What are the new prices?

Tomas says, “I know that 10 more than 72 is 82 because I only have to look at the tens digit.” Is he correct? Explain your reasoning.

Molly is counting backwards in 10s. She says forty-nine, thirty-nine, twenty-nine and then stops. What numbers comes next and why?

Class 3 gives one of their full packets of crayons away.

How many crayons do they have left?

Yes, because when you add ten you aren’t adding ones.

19 because you take one ten away from 29

43

They will have four full packs left which is four tens, and three crayon which represents three ones.
Add and Subtract 10s

Notes and Guidance

Children should make use of place value to add and subtract 10s from a given number within 100. The key teaching point again is the importance of the tens digit within the given numbers, and children should be encouraged to see the relationship.

For example $64 + 20 = 84$

Mathematical Talk

Which column changes?
Which column stays the same?

Varied Fluency

Continue the number track by adding 20 each time.

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>

</table>
Add and Subtract 10s

Reasoning and Problem Solving

Tom has three spare red beads.

What numbers could he make? Explain your answer.

23
33
43

He doesn’t have to use all of the beads.

Here are Class 2’s crayons.

They are given a new box of 10 each day for a week.

How many crayons do they have at the end of the week?

Discussion could be had about whether it’s a full week or a school week.

Answers would be 96 or 76 respectively.

Circles represent 20

Triangles represent 10

Squares represent 50

What is the value of each row and column?

Rows
( top to bottom)
80
80
30

Columns
( left to right)
80
80
30
Add 2-digits and 1-digit

Notes and Guidance

Before crossing the 10 with addition, children need to have a strong understanding of place value. The idea that ten ones are the same as one ten is essential here. They need to be able to count to 20 and need to be able to partition two-digit numbers in order to add them. They need to understand the difference between one-digit and two-digit numbers and line them up in columns. In order to progress to using the number line more efficiently, children need to be secure in their number bonds.

Mathematical Talk

Using Base 10, can you partition your numbers?

Can we exchange 10 ones for one ten?

How many ones do we have? How many tens do we have?

Can you draw the Base 10 and show the addition pictorially?

Varied Fluency

17 + 5 =

Can you put the larger number in your head and count on the smaller number? Start at 17 and count on 5.

Can we use number bonds to solve the addition more efficiently?

We can partition 5 into 3 and 2 and use this to bridge the 10.

Find the total of 28 and 7

<table>
<thead>
<tr>
<th>Tens</th>
<th>Ones</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>8</td>
</tr>
<tr>
<td></td>
<td>+ 7</td>
</tr>
<tr>
<td></td>
<td>3</td>
</tr>
<tr>
<td></td>
<td>5</td>
</tr>
<tr>
<td></td>
<td>1</td>
</tr>
</tbody>
</table>
Add 2-digits and 1-digit

Reasoning and Problem Solving

Always, sometimes, never.

Sometimes, because if your ones total 10 or more you will have to exchange them which will change the tens digit.

I am thinking of a two-digit number, if I add ones to it, I will only need to change the ones digit.

Explained your answer.

Here are three digit cards.

6 7 8

Place the digit cards in the number sentence.

How many different totals can you find?

\[
\underline{} \underline{} + \underline{} =
\]

What is the smallest total?

What is the largest total?

67 + 8 = 75
68 + 7 = 75
76 + 8 = 84
78 + 6 = 84
86 + 7 = 93
87 + 6 = 93

75 is the smallest total.

93 is the largest total.
Subtract 1-digit from 2-digits

Notes and Guidance

Just as with addition, children need to have a strong understanding of place value for subtraction. Children need to be able to count to 20 and need to be able to partition two-digit numbers in order to subtract from them. They need to understand the difference between one-digit and two-digit numbers and line them up in columns. In order to progress to using the number line more efficiently, children need to be secure in their number bonds.

Mathematical Talk

Are we counting backwards or forwards on the number line?

Have we got enough ones to subtract?

Can we exchange a ten for ten ones?

How can we show the takeaway? Can we cross out the cubes?

Varied Fluency

22 − 7 =

Can you put the larger number in your head and count back the smaller number? Start at 22 and count back 7.

Can we use number bonds to subtract more efficiently?

We can partition 7 into 5 and 2 and use this to bridge the 10.

Subtract 8 from 24

- Can we take 8 ones away?
- Exchange one ten for ten ones.
- Take away 8 ones.
- Can you write this using the column method?
Subtract 1-digit from 2-digits

Reasoning and Problem Solving

Jack and Eva are solving the subtraction 23 – 9

Here are their methods:

Jack
I put 9 in my head and counted on to 23

Eva
I put 23 in my head and counted back 9

Who’s method is the most efficient?
Can you explain why?
Can you think of another method to solve the subtraction.

Eva’s method is most efficient because there are less steps to take. The numbers are quite far apart so Harry’s method of finding the difference takes a long time and has more room for error.

Jack is counting back to solve 35 – 7

He counts
35, 34, 33, 32, 31, 30, 29

Is Jack correct?

Explain your answer.

Match the number sentences to the number bonds that make the method more efficient.

42 – 5  42 – 2 – 3
42 – 7  43 – 3 – 3
43 – 8  43 – 3 – 5
43 – 6  42 – 2 – 5

Jack is not correct as he has included 35 when counting back.
This is a common mistake and can be modelled on a number line.
Add 2-digit Numbers (1)

Notes and Guidance
This step is an important pre-requisite before children add two-digit numbers with an exchange. Focus on the language of tens and ones and look at different methods to add the numbers including the column method. It is important that teachers always show the children to start with the ones when adding using the column method.

Mathematical Talk
Can you partition the number into tens and ones?
Can you count the ones? Can you count the tens?
Can you show your addition by drawing the Base 10 to help?
Can you represent the problem?

Varied Fluency
Find the sum of 34 and 23

\[ \begin{align*}
\underline{34} & \quad + \quad \underline{23} \\
\underline{57} &
\end{align*} \]

64 + 12 =
4 ones + 2 ones =
6 tens + 1 ten =
_____ tens + _____ ones =

Hamza has 41 sweets. Jemima has 55 sweets. How many sweets do they have altogether?
Add 2-digit Numbers (1)

Reasoning and Problem Solving

Katie has 12 marbles.

Jim has 13 marbles more than Katie.

How many marbles do they have altogether?

Jim has 25 marbles.

Altogether they have 37 marbles.

What digits could go in the boxes?

[ ][ ] 2 + [ ] 5 = 87

Possible answers:
1 and 7
2 and 6
3 and 5
4 and 4
5 and 3
6 and 2
7 and 1

Interesting discussion could be had around is 1 and 7 different than 7 and 1? Etc.
Add 2-digit Numbers (2)

Notes and Guidance

Children use Base 10 and partitioning to add together 2-digit numbers including an exchange.

They have already seen what happens when there are more than 10 ones and should be confident in exchanging 10 ones for one 10.

Mathematical Talk

What is the value of the digits?
How many ones do we have altogether?
How many tens do we have altogether?
Can we exchange ten ones for one ten?
What is the sum of the numbers?
What is the total?
How many have we got altogether?

Varied Fluency

64 + 17 = ______
4 ones + 7 ones = ______
6 tens + 1 ten = ______
_____ tens + _____ ones = _____

Find the sum of 35 and 26

• Partition both the numbers.
• Add together the ones. Have we got 10 ones?
• Exchange 10 ones for 1 ten.
• How many ones do we have?
• Add together the tens. How many do we have altogether?

Class 3 has 37 pencils.
Class 4 has 43 pencils.

How many pencils do they have altogether?
### Add 2-digit Numbers (2)

#### Reasoning and Problem Solving

<table>

\hline
2 \\
\hline
4 \quad 2
\end{array}
\]

How do you know you have found all the pairs?

What is the same about all the pairs of numbers?

All the pairs of ones add up to 12
Subtract with 2-digits (1)

Notes and Guidance
This step is an important step before children start to look at subtraction where they cross a tens boundary.

Children need to use concrete materials but also draw images of the Base 10 so they can independently solve problems.

Varied Fluency

78 minus 34 = ____
8 ones – 4 ones = ____
7 tens – 3 tens = ____
We have ____ tens and ____ ones.

34 – 13 = ____

Mathematical Talk
Do we need to make both numbers in the subtraction before we take away?
Which number do we need to make? The larger number or the smaller?
What are the numbers worth? Tens or ones?
What happens if we have nothing left in a column? Which number do we write?

- Partition the number 34.
- Partition 13 and subtract the ones and the tens.
- Place the partitioned number back together.

Subtract 13 from 28

\[
\begin{array}{c}
\text{34} \\
\hline
\text{30} \\
\text{4} \\
\hline
-10 \\
-3 \\
\hline
\text{20} \\
\text{1} \\
\end{array}
\]

\[
\begin{array}{c}
\text{28} \\
-13 \\
\hline
15
\end{array}
\]
Jasmine has 33 stickers.

Ollie has 54 stickers.

How many more stickers does Ollie have?

What method did you use to solve the problem?

Here the children are working out the difference.

Children might use subtraction to solve the problem or they might count on to find the difference.

Ollie has 21 more stickers than Jasmine.

Find the missing numbers.

\[
\begin{array}{c}
6 \\
\end{array}
- \begin{array}{c}
2 \\
\end{array}
\quad = \quad \begin{array}{c}
4 \\
2 \\
\end{array}
\]

Is this the only possible solution? Explain your answer.

Make the numbers using Base 10 to help you find your answer.

9 and 7
8 and 6
7 and 5
6 and 4
5 and 3
4 and 2
3 and 1
2 and 0
Subtract with 2-digits (2)

Notes and Guidance
Children use their knowledge that one ten is the same as ten ones to exchange when crossing a ten in subtraction.

Varied Fluency
Use the number line to subtract 12 from 51

Can you subtract the ones first and then the tens?
Can you partition the ones to count back to the next ten and then subtract the tens?

42 - 15 =

We can't subtract the ones. Can we partition differently?

Now we can subtract the ones and then subtract the tens.

42 - 15 = 27

Mathematical Talk
Have we got enough ones to take away?
Can we exchange one ten for ten ones?
How many have we got left?
What is the difference between the numbers?
Do we always need to subtract the ones first? Why do we always subtract the ones first?
Which method is the most efficient? Subtraction or counting on to find the difference?
Eva and Whitney are working out some subtractions.

Whitney

---

I am working out

74 − 56

Eva

One of my numbers in my question is 15

Whitney’s answer is double Eva’s answer.

What could Zoe’s subtraction be?

Whitney’s answer is 18

Eva’s answer is 9

Eva’s question could be 15 − 6 or 24 − 15

Find the greatest whole number that can complete each number sentence below.

45 − 17 > 14 + ___

26 + 15 < 60 − ___

Explain your answer.

13

18
Bonds to 100 (Tens and Ones)

Notes and Guidance

Here children build on their earlier work of number bonds to 100 with tens and number bonds to 10 and 20.

They use their new knowledge of exchange to find number bonds to 100 with tens and ones.

Mathematical Talk

How many more do we need to make 100?

How many tens are in 100?

If I have 35, do I need 7 tens and 5 ones to make 100? Explain why.

Can you make the number using Base 10?
Can you add more Base 10 to the number to make 100?

Varied Fluency

Use a 100 square.

- 40 squares are shaded, how many are not shaded?
- 45 squares are shaded, how many are not shaded?
- 54 squares are shaded, how many are not shaded?

Hamza is making 100 with Base 10.
How much more does he need if he has:

- 5 tens and 3 ones
- 37

25 + ___ = 100
___ + 69 = 100
100 − 84 = ___
100 − ___ = 11
Bonds to 100 (Tens and Ones)

Reasoning and Problem Solving

Chris has completed the missing number sentence.

\[ 46 + 64 = 100 \]

Is Chris correct? Explain your answer.

Chris is incorrect. He has seen number bonds to 10 but forgotten that he would need to exchange ten ones for one ten.

Complete the pattern.

\[ 15 + 85 = 100 \]
\[ 20 + 80 = 100 \]
\[ 25 + 75 = 100 \]
\[ 30 + \_\_ = 100 \]
\[ \_\_ + \_\_ = 100 \]

Can you explain the pattern?

Each row and column adds up to 100.

Complete the grid.

\[
\begin{array}{ccc}
45 & 45 & 10 \\
35 & & \\
15 & 65 & \\
\end{array}
\]

The first numbers are going up in fives and the second numbers are going down in fives. All of the number sentences are number bonds to 100.
Add Three 1-digit Numbers

Notes and Guidance

Children need to use their knowledge of commutativity to find the most efficient and quick way to add the three one-digit numbers.

They look for number bonds to 10 to help them add more efficiently.

Mathematical Talk

Can we change the order of the numbers to make the calculation easier?
Why are we allowed to change the order of the numbers?
Which two numbers did you add first? Why?
What if you added a different two numbers first, would your answer be the same?

Varied Fluency

- Use ten frames and counters to add the numbers: 4 + 3 + 6
  - Can you add the numbers in a different way to find a number bond to 10?
  - 4 + 6 = 10
  - 10 + 3 = 13

- Find the totals of each row and column.

- Use <, > or = to compare the number sentences.
  - 5 + 4 + 6 〇 6 + 5 + 4
  - 7 + 3 + 8 〇 7 + 7 + 3
  - 9 + 2 + 5 〇 8 + 3 + 5
  - 8 + 4 + 2 〇 2 + 5 + 8
## Add Three 1-digit Numbers

### Reasoning and Problem Solving

<table>
<thead>
<tr>
<th>Always, sometimes, never</th>
<th>Always, children may recognise that two odds make an even so three odds make an odd.</th>
<th>Take 3 consecutive one-digit numbers, e.g. 4, 5 and 6.</th>
</tr>
</thead>
<tbody>
<tr>
<td>odd + odd + odd = odd</td>
<td>Use one-digit numbers to test if this is true. E.g.</td>
<td>Add them together.</td>
</tr>
<tr>
<td></td>
<td>3 + 5 + 7</td>
<td>What do you notice?</td>
</tr>
<tr>
<td>Which numbers would you add together first in the following number sentences? Why would you add those first?</td>
<td>3 and 7 first – number bond to 10 8 and 2 first – number bond to 10 4 and 4 first – double a number.</td>
<td>Choose different groups of 3 consecutive one-digit numbers and see if there is a pattern.</td>
</tr>
<tr>
<td></td>
<td>3 + 5 + 7 =</td>
<td></td>
</tr>
<tr>
<td></td>
<td>8 + 2 + 6 =</td>
<td></td>
</tr>
<tr>
<td></td>
<td>4 + 3 + 4 =</td>
<td></td>
</tr>
<tr>
<td>Is there always an easier order to add three one-digit numbers?</td>
<td>No, e.g. 5 + 6 + 7</td>
<td></td>
</tr>
</tbody>
</table>

1 + 2 + 3 = 6  
2 + 3 + 4 = 9  
3 + 4 + 5 = 12  
4 + 5 + 6 = 15  
5 + 6 + 7 = 18  
6 + 7 + 8 = 21  
7 + 8 + 9 = 24  

If we order the groups, we can see that the totals go up by 3 each time. This is because we are adding one to each number each time so we are adding 3 extra altogether.
Overview

Small Steps

- Count money – pence
- Count money – pounds (notes and coins)
- Count money – notes and coins
- Select money
- Make the same amount
- Compare money
- Find the total
- Find the difference
- Find change
- Two-step problems

NC Objectives

- Recognise and use symbols for pounds (£) and pence (p); combine amounts to make a particular value.
- Find different combinations of coins that equal the same amounts of money.
- Solve simple problems in a practical context involving addition and subtraction of money of the same unit, including giving change.
**Count Money - Pence**

**Notes and Guidance**

This block introduces the £ and p symbols for the first time.

Children will count in 1p, 2p, 5p and 10p coins. Because of related facts, children can also count in 20p coins.

Children do not convert between pounds and pence, therefore children will not count in 50p coins.

**Mathematical Talk**

What is different about the coins you have counted?

What do you notice about the totals?

Are silver coins always worth more than copper coins?

What different ways can you count the coins?

Which is the quickest way?

---

**Varied Fluency**

Count the money.

\[ \begin{array}{c}
\text{

\[ \begin{array}{c}
\text{= } \underline{\text{ } \text{p}} \\
\text{= } \underline{\text{ } \text{p}} \\
\text{= } \underline{\text{ } \text{p}} \\
\text{= } \underline{\text{ } \text{p}} \\
\text{= } \underline{\text{ } \text{p}}
\end{array}
\end{array}\]

Use <, > or = to compare the money.

\[ \begin{array}{c}
\text{

\[ \begin{array}{c}
\text{= } \underline{\text{ } \text{p}} \\
\text{= } \underline{\text{ } \text{p}} \\
\text{= } \underline{\text{ } \text{p}} \\
\text{= } \underline{\text{ } \text{p}}
\end{array}
\end{array}\]
### Count Money - Pence

#### Reasoning and Problem Solving

<table>
<thead>
<tr>
<th>Jamie selects four of these coins.</th>
<th>Example answers:</th>
</tr>
</thead>
<tbody>
<tr>
<td>He can use the coins more than once.</td>
<td>20p, 10p, 10p and 1p makes 41p.</td>
</tr>
<tr>
<td>What total could he make?</td>
<td>5p, 5p, 5p and 5p makes 20p.</td>
</tr>
<tr>
<td>What is the lowest total?</td>
<td>1p, 20p, 5p and 2p makes 28p.</td>
</tr>
<tr>
<td>What is the greatest total?</td>
<td>The lowest total would be 1p, 1p, 1p and 1, makes 4p.</td>
</tr>
<tr>
<td></td>
<td>The greatest total would be 20p, 20p, 20p and 20p makes 80p.</td>
</tr>
</tbody>
</table>

#### Draw coins to make the statements correct.

| > |
| < |

For the first one, any answer showing less than 30p on the right is correct. E.g. two 10p coins.

For the second one, any answer showing less than 25p on the left. E.g. three 2p coins.
Count Money - Pounds

Notes and Guidance

Children will continue counting but this time it will be in pounds not pence. The £ symbol will be introduced. Children must be aware that both coins and notes are used for pounds. Children will count in £1, £2, £5, £10 and £20s. In this year group, children work within 100 therefore children will not count in £50s.

Mathematical Talk

Which is the hardest to count? Which is the easiest? Why?
What do you notice about the amounts?
Does it matter which side the equals sign is?
Can you find the total in a different way?
What was your method for counting in 20s?

Varied Fluency

Count the money.

£__ =

Complete the bar models.

<p>| | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

£30

Match the money to the correct total.

£25
£60
£10

Which is the odd one out? Explain why.
Count Money - Pounds

Reasoning and Problem Solving

Dan thinks he has £13

Is he correct?

Explain your answer.

No, because three £2 coins make £6

£10 and £6 is equal to £16

He has mistaken his £2 coins for £1 coins.

Explain the mistake.

£2, £4, £6, £7, £8, £10

£7 is the mistake. It is an odd number. The 2 times table are all even.

When counting in £2s, we would say £2, £4, £6, £8, £10
Count Money – Notes & Coins

Notes and Guidance

In this step, children will build on counting by bringing pounds and pence together.

Decimal notation is not used until KS2 therefore children will write the total using ‘and’ e.g. £5 and 30p rather than £5.30

Children will not count across £1. They will count the pounds and pence separately before putting them together.

Mathematical Talk

How did you work out the missing amount?

What strategy did you use to count the money?

Explain what to do when the pounds and pence are mixed up.

Varied Fluency

How much money is there altogether?

There is £____ and ____p.

Complete the part-whole model.

What’s the same and what’s different about the parts?

Fill in the gaps to make the statements correct.

• £10 + £5 + 50p = £____ and ____p
• £20 + £2 + 10p + 10p + 2p = £____ and ____p
• £5 + £___ + 50p + 20p + 20p + 1p = £10 and ____p
Count Money – Notes & Coins

Reasoning and Problem Solving

How many ways can you complete the part-whole model by drawing money?

Example answers:

Mo has the following coins.

He thinks he has 51p.

Explain his mistake.

Mo thinks the 5p is a 50p coin. He has 6p. Alternatively, he has combined the 5 and 1 from each coin.

Here are some coins and a note.

Ali says, “There is 10p”.

Joe says, “There is £10”.

Are either of them correct?

Explain why.

No, Ali and Joe have taken the digits 2, 2, 5 and 1 and added them together.

The coins are a mix of pounds and pence so need to be counted separately.
Select Money

Notes and Guidance

Children select coins from an amount given to them. They will use these practically, draw them and write the abstract amounts. They will continue to use both pounds and pence to embed previous learning. Children are continuing to work on recognising money by selecting the correct coins or notes from a wide range.

Mathematical Talk

Is your answer the same as your partner?

Does it matter if you say pence or pounds first?

Does this change the total?

Can you show this amount in a different way?

Varied Fluency

Circle 56p.

Which does not show 50p?

Draw money on the purses to match the amounts.

£21 and 32p

£13 and 40p
Select Money

Reasoning and Problem Solving

Rosie says,

I have 43p in silver coins.

Do you agree?
Explain why.

No, because 3 pence can only be made with copper coins.

Hanna and Ste both claim to have 90p.
Hanna has 3 coins and Ste has 4 coins.
Could they be correct?
Which coins could they have?

Yes, they can because:
Ste = 50p, 20p, 10p, 10p.

Use the money to fill the purses.
You can only use each coin or note once.
Cross them out once you have used them.

Example answer:

£10 and 15p
£5 and 51p

Circle the odd one out.

23p = 20p, 2p, 1p
25p = 20p, 5p
28p = 20p, 8p

Explain your answer.

28p = 20p, 8p is because if you are using coins there is not an 8p coin.
Children may give other answers.
Make the Same Amount

Notes and Guidance

Children explore the different ways of making the same amount. As before, pence coins will not cross into the pounds.

Examples need to be modelled where pounds and pence are together but children need to continue to be encouraged to count the pounds and pence separately.

Mathematical Talk

How is your way different to a partner?

Can you swap a coin/note for others and still make the same amount?

What is the smallest amount of coins you can use to make ____?

How many ways can you make ____?

Varied Fluency

Match the amounts.

Complete the part-whole models.

The Base 10 represents money. What coin is represented by each circle?
Make the Same Amount

Reasoning and Problem Solving

Make 50p three ways using the coins below. You can use the coins more than once.

Example answers:
- 20p, 20p, 10p
- 10p, 10p, 10p, 10p, 5p, 5p
- 1p (50 times)

How many ways can you make 10p using only copper coins? Did you use a strategy?

Example answers:
- 2p, 2p, 2p, 2p, 2p
- 2p, 2p, 2p, 1p, 1p
**Compare Money**

**Notes and Guidance**

Children compare two different values in either pounds or pence. Examples may be used with both pounds and pence, but children will only focus on one of these and the other must be the same. E.g. £3 and 10p > £2 and 10p. Children recap comparing vocabulary such as greater/less than and use the inequality symbols.

**Mathematical Talk**

Do you notice anything about the amounts you have compared?

What's the same? What's different?

Can you add a value that will go in between the greatest and the least?

**Varied Fluency**

Circle the box with the greatest amount.

Who has the most? Who has the least? How do you know?

Use <, > or = to compare the amounts.

Dora: I have £64

Teddy: I have 64p
Compare Money

Reasoning and Problem Solving

Anna has three coins in her hand. Jack says,

I have more than you because I have a 50 pence coin.

Is he correct? Explain why.

It depends on the coins Anna has. Children explore and show e.g.

20p, 20p, 20p > 50p

5p, 2p, 2p < 50p

True or False?

5 copper coins can be worth more than 1 silver coin.

Four 5 pence coins are worth more than two 10 pence coins.

Do you agree? Explain why.

Only true when 5p is the silver coin.

Children should explore different true and false answers.

No, they are equal to each other. They both make 20p.
Find the Total

Notes and Guidance

Children will build on their knowledge of addition to add money including:
• 2-digit and 2-digit
• 2-digit and ones
• 2-digit and tens
• 3-single digits
Children will be encouraged to use different methods to add such as count on, partitioning and regrouping.

Mathematical Talk

Was your method different to a friend?

What is the most efficient method? Why?

Can you write a worded question for a friend?

What was the greatest amount you found?

Varied Fluency

Complete the table.

<table>
<thead>
<tr>
<th>Pounds</th>
<th>Pence</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>£4</td>
<td>25p</td>
<td>£___ and ___p</td>
</tr>
<tr>
<td>£2</td>
<td></td>
<td>£2 and 40p</td>
</tr>
<tr>
<td></td>
<td>65p</td>
<td>£20 and 65 pence</td>
</tr>
<tr>
<td></td>
<td>55 pence</td>
<td>£15 and 20p</td>
</tr>
</tbody>
</table>

Complete the bar models.

7p  5p  9p
6p  4p  2p

Jackson buys bread and milk.

49p
30p

How much does he spend?
Find the Total

Reasoning and Problem Solving

Dan has these coins and notes.

He makes an amount greater than £20 but less than £30.

Draw the money he could have used. You can use each coin or note more than once.

How many different ways can you find?

Possible answers:
- £20, £20 and £5 makes £25
- £10, £5, £5, £2 makes £22
- Etc.

Here is a shopping list.

<table>
<thead>
<tr>
<th>Item</th>
<th>Price</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rubber</td>
<td>20p</td>
</tr>
<tr>
<td>Ruler</td>
<td>18p</td>
</tr>
<tr>
<td>Pencil</td>
<td>32p</td>
</tr>
<tr>
<td>Crayon</td>
<td>27p</td>
</tr>
<tr>
<td>Pen</td>
<td>45p</td>
</tr>
<tr>
<td>Glue</td>
<td>36p</td>
</tr>
</tbody>
</table>

- I spend exactly 50p. Which two items did I buy?
- I bought two of the same item and it cost me 90p. What was the item?
- Choose two items. How many different amounts can you make?
- What is the closest you can get to 65p.

The ruler and the pencil as 18p and 32p makes 50p.

Two pens as 45p and 45p makes 90p.

Children to explore the totals that can be made by adding two items together.

The rubber and the pen would cost 65p as 20p and 45p make 65p.
Find the Difference

Notes and Guidance

Children expand their knowledge of addition and subtraction strategies by specifically finding the difference between two amounts.

Both counting on and counting back need to be modelled in this step. Children need to discuss which is the most efficient for different questions.

Mathematical Talk

How many more?

What's the difference?

How much less?/How many fewer?

What method did you use to work this out?

Is this different to a partner? How?

Varied Fluency

Work out the difference between a bag of sweets and a bar of chocolate.

25p

45p

How many pounds less does Amee have?

Paul has £2 and 15p. Tony has £2 and 40p. How much more money does Tony have than Paul?
Find the Difference

Reasoning and Problem Solving

What could Mo have?

Work out the difference between the amounts.

Example answers:
Mo could have more by:
• 50p, 20p, 1p
• 50p, 20p, 2p

Mo could have the same by:
• 50p, 5p, 2p

Mo could have less by:
• 5p, 5p, 1p
• 20p, 10p, 2p

Jake has 2p.

Jenny has 10p.

Both of them have a 2p coin.

What other coins could Jenny have?

4 × 2p
3 × 2p and 2 × 1p
2 × 2p and 4 × 1p
1 × 2p and 6 × 1p
8 × 1p
5p and 2p and 1p
5p and 3 × 1p

Whitney

I have 57p.

I have 2 silver coins and 1 bronze coin.

Mo
Find Change

Notes and Guidance

Children build on their subtraction skills by finding change. They need to identify the amounts from coins given, write the calculations and choose efficient methods.

In this step, children will be introduced to converting £1 to 100p to be able to subtract from £1. This links to their number bond knowledge to 100.

Mathematical Talk

Can you write a calculation for this?

Why is it important to use the £ or p symbol?

What strategy did you use to find the change? Did you use concrete objects to help?

When would you use this skill?

Varied Fluency

Lola has these coins.

She spends 53p. What money will she have left? What coins could it be?

Write the calculation to find the change.

32p

Benji spends 65p in the shop. He pays with a £1 coin. How much change will he receive?
## Find Change

### Reasoning and Problem Solving

<table>
<thead>
<tr>
<th>I have 20p.</th>
<th>Example answers:</th>
<th>I paid for my shopping with one coin.</th>
</tr>
</thead>
<tbody>
<tr>
<td>My change is more than 5p but less than 10p.</td>
<td>Chocolate bar or a sweet and banana.</td>
<td>Here is my change.</td>
</tr>
<tr>
<td>What could I have bought?</td>
<td></td>
<td>What could I have paid with and how much would the item have been?</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Sweet</th>
<th>Apples</th>
<th>Chocolate</th>
<th>Banana</th>
</tr>
</thead>
<tbody>
<tr>
<td>7p</td>
<td>18p</td>
<td>12p</td>
<td>4p</td>
</tr>
</tbody>
</table>

Could have paid with a 20p coin and it would have cost 3p.

Could have paid with a 50p coin and it would have cost 33p.

Could have paid with a £1 coin and it would have cost 83p.
Two-step Problems

Notes and Guidance

Children draw together all of the skills they have used in this block and consolidate their previous addition and subtraction learning. Scaffolding may need to be given to children to see the different steps. Bar modelling is really useful to see the parts and wholes, and supports children in choosing the correct calculation.

Mathematical Talk

Here is a one step problem. Can you think of a second step? Can you write your own two step word problem? Did you use a concrete or pictorial representation to help you?

Varied Fluency

Rachel has £33 in her money bank, and gets £40 more. Fill in the bar model and write a calculation to show her total.

\[
\begin{array}{c}
\text{£33} \\
\text{£40} \\
\hline
\text{___} + \text{___} = \text{___}
\end{array}
\]

She then buys a top for £25. Complete the bar model and write a calculation to show what she has left.

\[
\begin{array}{c}
\text{£25} \\
\text{___} \\
\hline
\text{___} - \text{___} = \text{___}
\end{array}
\]

Bilal has these coins.

He spends 54p. How much does he have left?

A scarf is £12 and a bag is £25. Emily buys one of each and pays with a £50 note. How much change will she receive?
## Two-step Problems

### Reasoning and Problem Solving

<table>
<thead>
<tr>
<th>Ghost Train: 90p</th>
<th>No, because she only has 80p.</th>
<th>Alex has 90 pence. He bought a rubber for 30 pence and wants to buy a pencil.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>She would need 10p more.</td>
<td>The shopkeeper will not sell him the pencil. Explain why.</td>
</tr>
<tr>
<td>Emily finds a 20p coin.</td>
<td>90p &gt; 80p</td>
<td>90p - 30p = 60p</td>
</tr>
<tr>
<td>She puts it with her other three 20p coins.</td>
<td></td>
<td>70p &gt; 60p</td>
</tr>
<tr>
<td>Does Emily have enough to ride the ghost train?</td>
<td></td>
<td>He does not have enough money to buy the pencil.</td>
</tr>
<tr>
<td>Explain why.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### Overview

**Small Steps**

<table>
<thead>
<tr>
<th>Objective</th>
</tr>
</thead>
<tbody>
<tr>
<td>Recognise equal groups</td>
</tr>
<tr>
<td>Make equal groups</td>
</tr>
<tr>
<td>Add equal groups</td>
</tr>
<tr>
<td>Multiplication sentences using the × symbol</td>
</tr>
<tr>
<td>Multiplication sentences from pictures</td>
</tr>
<tr>
<td>Use arrays</td>
</tr>
<tr>
<td>2 times-table</td>
</tr>
<tr>
<td>5 times-table</td>
</tr>
<tr>
<td>10 times-table</td>
</tr>
</tbody>
</table>

### NC Objectives

Recall and use multiplication and division facts for the 2, 5 and 10 times-tables, including recognising odd and even numbers.

Calculate mathematical statements for multiplication and division within the multiplication tables and write them using the multiplication (×), division (÷) and equals (=) sign.

Solve problems involving multiplication and division, using materials, arrays, repeated addition, mental methods and multiplication and division facts, including problems in contexts.

Show that the multiplication of two numbers can be done in any order (commutative) and division of one number by another cannot.
Recognise Equal Groups

Notes and Guidance

Children describe equal groups using stem sentences to support them. It is important that children know what groups are equal and which are unequal. The addition or multiplication symbol is not used within this small step but this language will support them in understanding repeated addition and multiplication. The examples included, refer to the times tables facts year 2 children need to know.

Mathematical Talk

What does the 2 represent? What does the 3 represent?

What does the 5 represent? What does the 2 represent?

I have \( X \) equal groups, with \( Y \) in each group. Which image am I describing?

Varied Fluency

Complete the stem sentences.

There are ___ equal groups with ___ in each group.

Complete the sentences.

There are ___ equal groups with ___ in each group.

There are two ________.

Describe the equal groups.

What is the same and what is different in each group?
Recognise Equal Groups

Reasoning and Problem Solving

Which group of money is the odd one out?

The bags with 5p in each because the 2ps and 1ps have 4p in each group.

Sort into equal and unequal groups.

<table>
<thead>
<tr>
<th>Equal Groups</th>
<th>Unequal Groups</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Create your own picture to go in each column.

Spot the mistake.

There are 10 equal groups with 2 in each group. There are ten 2s.

Hearts and dots in unequal groups.
Stars and squares in equal groups.

There are 2 equal groups with 10 in each group
There are two 10s.

Explain why.
Make Equal Groups

Notes and Guidance

Children should be able to make equal groups to demonstrate their understanding of the new language.

With the examples provided to the children, it is important that they are exposed to numerals and words, as well as multiple representations.

Mathematical Talk

How else could you represent these in equal groups?

How many ways can you represent this?

How have you grouped your items?

Varied Fluency

The Base 10 shows six equal groups with ten in each group. There are six tens.

How else can you represent these as equal groups?

How many ways can you represent ‘four equal groups with three in each group’?

What else do we need to show ‘five 3s’?

How else can we show five equal groups with 3 in each group? Compare your answer with a partner.
### Make Equal Groups

#### Reasoning and Problem Solving

<table>
<thead>
<tr>
<th>Has Eva shown the equal groups correctly?</th>
<th>Children to draw or make 3 towers with 2 in each tower.</th>
<th>Match the equal groups together.</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Image of apples]</td>
<td>[Image of towers]</td>
<td>[Image of sweets, cubes, coins]</td>
</tr>
<tr>
<td>Draw or use cubes to show what Eva should have done.</td>
<td>[Image of towers with 2 in each]</td>
<td>Sweets, squares, Two 3s.</td>
</tr>
<tr>
<td>How can you make the groups equal?</td>
<td>Various answers e.g. move one star from right to left box. Any answer that makes them equal.</td>
<td>Dice, cubes, Three 5s.</td>
</tr>
<tr>
<td>[Image of stars]</td>
<td></td>
<td>Coins, number pieces, Two 10s.</td>
</tr>
</tbody>
</table>
Add Equal Groups

Notes and Guidance

Children start relating equal groups to repeated addition.

At this point children would have added 3 single digits together, therefore they can add any 3 numbers together. If there are more than 3 equal groups, the examples must be limited to 2s, 5s, 10s and 3s.

Mathematical Talk

What do the two 3s represent?

Why are we using the addition symbol?

How else can we show the equal groups?

What is the total?

Varied Fluency

Complete:

There are ___ equal groups with ___ in each group.
There are ___ 3s.
___ + ___ = 6

Complete:

There are ___ equal groups with ___ in each group.
There are three ___s.
___ + ___ + ___ = 12

Complete the table.

<table>
<thead>
<tr>
<th>Draw It</th>
<th>Say It</th>
<th>Add It</th>
</tr>
</thead>
<tbody>
<tr>
<td>🎨</td>
<td>🎨</td>
<td>🎨</td>
</tr>
<tr>
<td>🎨</td>
<td>🎨</td>
<td>🎨</td>
</tr>
<tr>
<td>🎨</td>
<td>🎨</td>
<td>🎨</td>
</tr>
</tbody>
</table>
Add Equal Groups

Reasoning and Problem Solving

True or False?

5 + 5 = 2 + 2 + 2 + 2 + 2

This is true because they both equal 10 but the groups look different.

Which one does not belong?

Two 5s

Ten

What do we need to change to make them all represent the same?

The three 5s do not belong, we would have to take away one five.
The Multiplication Symbol

Notes and Guidance

Children are introduced to the multiplication symbol for the first time. They should link the stem sentences, repeated addition and multiplication together. They should also be able to interpret mathematical stories and create their own. The use of concrete resources and pictorial representations is still vital for understanding.

Mathematical Talk

What does the 3 represent? What does the 6 represent?

What does lots of mean?

Does 18 = 3 × 6 mean the same?

How is 6 + 6 + 6 the same as 3 × 6?

Varied Fluency

Complete the sentences to describe the equal groups.

\[ \_\_\_ + \_\_\_ + \_\_\_ = 18 \]
\[ \_\_\_ \times \_\_\_ = 18 \]

There are __ equal groups with ___ in each group.

There are three ___.

Complete the table.

<table>
<thead>
<tr>
<th>Three 2s</th>
<th>Draw It</th>
<th>Addition</th>
<th>Multiplication</th>
</tr>
</thead>
<tbody>
<tr>
<td>There are 3 equal groups with 2 in each group.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Complete:

<table>
<thead>
<tr>
<th>Addition</th>
<th>Multiplication</th>
<th>Story</th>
</tr>
</thead>
<tbody>
<tr>
<td>10 + 10 + 10</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>6 × 5</td>
<td></td>
</tr>
</tbody>
</table>
The Multiplication Symbol

Reasoning and Problem Solving

Is Mo correct? Explain why.

Draw an image to help you.

Use <, > or = to make the statements correct.

He is correct because

\[ 3 + 3 + 3 = 3 \times 3 \]

\[ 3 + 3 + 3 = 9 \]

\[ 3 \times 3 = 9 \]

Think of a multiplication to complete:

\[ 6 + 6 + 6 > \_ \times \_ \]

The total is 12, what could the addition and multiplication be?

Could be:

\[ 6 + 6 + 6 > 2 \times 2 \]

Any answer where it is less than 18

\[ 6 + 6 \text{ and } 2 \times 6 \]

\[ 3 + 3 + 3 + 3 = 4 \times 3 \]

\[ 2 + 2 + 2 + 2 + 2 \]

\[ = 6 \times 2 \]

\[ 4 + 4 + 4 = 3 \times 4 \]
Multiplication from Pictures

Notes and Guidance

Children will use the multiplication symbol and work out the total from pictures. They should also be able to interpret a word problem by drawing images to help them solve it.

Coins could be used within this small step too.

Mathematical Talk

What does the 4 represent?

What does the 3 represent?

What does the 12 represent?

Can you think of your own story for $3 \times 4 = 12$?

Varied Fluency

Complete:

___ × ___ = ___

___ lots of 3 = ___

___ multiplied by ___ = 12

Complete:

4 lots of 3 =

2 × ___

Complete the table.

<table>
<thead>
<tr>
<th>Picture</th>
<th>Multiplication</th>
<th>Sentence</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>4 × 10 = 40</td>
<td>4 lots of 10 is equal to 40</td>
</tr>
<tr>
<td></td>
<td>35 = 7 × 5</td>
<td>6 lots of 3 is equal to 18</td>
</tr>
</tbody>
</table>
### Multiplication from Pictures

#### Reasoning and Problem Solving

<table>
<thead>
<tr>
<th>There are three dolls in each basket.</th>
<th>The image could be 4 circles with 3 in each.</th>
<th>There are 2 groups with 5 people in each group.</th>
</tr>
</thead>
<tbody>
<tr>
<td>There are four baskets.</td>
<td>The calculation 3 × 4 = 12</td>
<td>There are 5 people in one group and 5 in the other.</td>
</tr>
<tr>
<td>How many dolls are there altogether?</td>
<td></td>
<td>There are 5 lots of 2 people.</td>
</tr>
<tr>
<td>Draw an image and write a calculation to represent the problem.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Write a sensible story for the calculation 4 × 10.</td>
<td>A possible story could be; there were four tables with ten children on each table; there were four purses with 10p in each purse etc.</td>
<td></td>
</tr>
<tr>
<td>Draw an image to illustrate your story.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Each calculation could explain the image.

```
2 × 5  
5 + 5  
5 × 2
```

Explain why.
Use Arrays

Notes and Guidance

Children explore arrays to see the commutativity between multiplication facts e.g. $5 \times 2 = 2 \times 5$

The use of the array could be used to help children calculate multiplication statements.

The symbol and language of ‘lots of’ should be used interchangeably.

Mathematical Talk

Where are the 2 lots of 3?

Where are the 3 lots of 2?

What do you notice?

What can we use to represent the eggs and shells? Can you draw an image?

Varied Fluency

On the image, find $2 \times 5$ and $5 \times 2$

Can you represent this array using another object?

Complete the number sentences to describe the arrays.

$2 \times 3$ and ___ $\times$ ___

___ $\times$ ___ and ___ $\times$ ___

Draw an array to show:

$3 \times 5 = 5 \times 3$

2 lots of 10 = 10 lots of 2
**Use Arrays**

**Reasoning and Problem Solving**

With 10 cubes, how many arrays can you create?

Once you have created your array complete:

\[
\_ \times \_ = \_ \times \_
\]

<table>
<thead>
<tr>
<th>2 \times 5 = 5 \times 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 \times 10 = 10 \times 1</td>
</tr>
</tbody>
</table>

Find different ways to solve six lots of three.

<table>
<thead>
<tr>
<th>Part of the array is hidden.</th>
</tr>
</thead>
<tbody>
<tr>
<td>4 \times 2</td>
</tr>
<tr>
<td>5 \times 2</td>
</tr>
<tr>
<td>6 \times 2</td>
</tr>
<tr>
<td>7 \times 2</td>
</tr>
<tr>
<td>8 \times 2</td>
</tr>
</tbody>
</table>

The total is less than 16

What could the array be?

Count in 3s
3 lots of 3 add 3 lots of 3
5 \times 3 add 1 \times 3
Etc.
The 2 Times Table

Notes and Guidance

Children should be comfortable with the concept of multiplication so they can apply this to the times tables that they need to be secure with. Images should be used to encourage children to count in twos as well as number tracks. Resources such as cubes and Numicon are important for children to explore equal groups within the 2 times table.

Mathematical Talk

If 16p is made using 2p coins, how many coins would there be?

How many 2s go into 16?

How can the images of the 5 bicycles help you to solve the problems?

Varied Fluency

Count in 2s to calculate how many eyes there are.

There are ___ eyes in total.
___ × ___ = ___

Complete the number track.

<table>
<thead>
<tr>
<th>2</th>
<th>4</th>
<th>8</th>
<th>12</th>
</tr>
</thead>
<tbody>
<tr>
<td>14</td>
<td>16</td>
<td>18</td>
<td>24</td>
</tr>
<tr>
<td>38</td>
<td>40</td>
<td>42</td>
<td>44</td>
</tr>
</tbody>
</table>

How many wheels are there on five bicycles?

If there are 14 wheels, how many bicycles are there?
The 2 Times Table

Reasoning and Problem Solving

<table>
<thead>
<tr>
<th>Fill in the blanks.</th>
<th>Eva says,</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 × ___ = 6</td>
<td>Every number in the 2 times table is even.</td>
</tr>
<tr>
<td>___ × 2 = 20</td>
<td></td>
</tr>
<tr>
<td>7 × 2 = ___</td>
<td></td>
</tr>
<tr>
<td>2</td>
<td></td>
</tr>
<tr>
<td>10</td>
<td></td>
</tr>
<tr>
<td>14</td>
<td></td>
</tr>
</tbody>
</table>

Thomas says that 10 × 2 = 22

Is he correct?

Explain how you know.

Yes, because 2 is even, and the 2 times table is going up in 2s. When you add two even numbers the answer is always even.

No, the answer should be 20

Children could draw an array or a picture to show their answer.
### The 5 Times Table

#### Notes and Guidance

Children can already count in 5s from any given number. They will also have been exposed to the 2 times table.

This small step is focused on the 5 times table and it is important to include the use of zero. Children should see the = sign at both ends of the calculation to understand what it means.

#### Mathematical Talk

If there are 30 petals, how many flowers? Can you count in 5s to 30? How many 5s go into 30?

How many 5s go into 35?

What does each symbol mean? Do we need to calculate?

### Varied Fluency

- **How many petals altogether?**

- **Write the calculation.**

- **There are 35 fingers. How many hands?**

- **Use <, > or = to make the statements correct.**

  - $2 \times 5 \quad \bigcirc \quad 5 \times 2$
  - $3 \times 2 \quad \bigcirc \quad 4 \times 5$
  - $10 \times 5 \quad \bigcirc \quad 5 \times 5$
### The 5 Times Table

#### Reasoning and Problem Solving

<table>
<thead>
<tr>
<th>Is Mo correct?</th>
<th>Mo is incorrect because some of the multiples in the five times table are even, e.g. 10, 20, 30</th>
</tr>
</thead>
<tbody>
<tr>
<td>Explain your answer.</td>
<td>Tommy and Rosie have both drawn bar models to show $7 \times 5$</td>
</tr>
<tr>
<td>Tubes of bubbles come in packs of 2 and 5</td>
<td>The answer is the same. Tommy shows seven lots of 5 whereas Rosie show five lots of 7</td>
</tr>
<tr>
<td>Lily has 22 tubes of bubbles.</td>
<td>Children can choose either way to represent $4 \times 5$</td>
</tr>
<tr>
<td>How many of each pack could she have?</td>
<td><strong>Lily could have 4 packs of 5 and 1 pack of 2, or 11 packs of 2, and 2 packs of 5 and 6 packs of 2</strong></td>
</tr>
<tr>
<td>How many ways can you do it?</td>
<td><strong>What’s the same and what is different about their bar models?</strong></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th></th>
<th>Tommy's Bar Model</th>
<th>Rosie's Bar Model</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>35</td>
<td>35</td>
</tr>
<tr>
<td>5</td>
<td>5</td>
<td>7</td>
</tr>
<tr>
<td>5</td>
<td>5</td>
<td>7</td>
</tr>
<tr>
<td>5</td>
<td>5</td>
<td>7</td>
</tr>
<tr>
<td>5</td>
<td>5</td>
<td>7</td>
</tr>
</tbody>
</table>

**Draw your own bar model to represent $4 \times 5$**
The 10 Times Table

Notes and Guidance

Children have counted in 10s from any given number. This small step is focused on the 10 times table and it is important to include the use of zero. Children should see the = sign at both ends of the calculation to understand what it means.

Mathematical Talk

What if there were 10 packs of crayons?
If there were 50 crayons altogether, how many packets?
How do you know?

How many tens go into 30? Can you count in 10s to 30?

What does greater than mean?
What does less than mean?

Varied Fluency

How many crayons are there altogether?

There are ____ crayons altogether.

____ × 10 = ____

Altougher there are 30 bottles, how many walls are there?

____ × 10 = 30

Think of a multiplication fact for 10s to go in each box.
The 10 Times Table

Reasoning and Problem Solving

On sports day, Tom runs 10 metres, 7 times.

Which of the calculations do not describe the word problem?

10 + 7
7 × 10
7 + 7 + 7 + 7 + 7 + 7
10 + 10 + 10 + 10 + 10 + 10 + 10

Explain why.

10 + 7 is incorrect because he has run 10 metres, 7 times, not 10 metres then 7 metres.

7 + 7 + 7 + 7 + 7 + 7 + 7 is incorrect because he doesn't run 7 metres. He runs 10 metres.

Some Base 10 is hidden.

The total is less than 100

What could the calculation be?

___ × 10 = ___

Tim says it could be 10 × 10
Is he correct? Explain your answer.

It could be
6 × 10 = 60
7 × 10 = 70
8 × 10 = 80
9 × 10 = 90

It can't be 10 × 10 because 100 is not less than 100
